Executive Summary:

Product Manager | B2B SaaS | Enterprise Workflows | Integrations & Activation

Product Manager with 5 years of experience driving activation, feature adoption, and enterprise workflow optimization across B2B SaaS platforms (MDR & CRM/CLM/HCM). Owned onboarding experience, automation activation, and platform performance metrics across different market segment. Strong in product discovery, KPI-led roadmap prioritization (RICE), and cross-functional execution translating customer insights into measurable product and business impact.

Skills:

- Product Discovery & Problem Definition & Product Strategy
- System workflows & Data flow understanding
- Roadmap Prioritization (RICE / Impact vs Effort)
- User Story Mapping
- Customer Interviews & Feedback Analysis
- Activation & Adoption & Optimization
- Product Analytics & KPI Tracking (Adoption, Retention, CSAT, Efficiency Metrics)
- Agile / Scrum Execution
- APIs (REST fundamentals), Authentication concepts (SSO/OAuth – conceptual)
- Stakeholder, Executive & Cross-Functional Collaboration (Engineering, Sales, Customer Success)
- Tools: Jira / Azure Boards, MixPanel, Tableau, Google Analytics, SQL, Power BI, N8N / Workflow Automation, SAP Analytics Cloud

Experiences:

New Era Technology Product Manager ([NewEraTech](#))

December 2021 - Present (Bangalore, India)

Own enterprise onboarding and adoption experience for Managed Detection & Response (MDR) and Digital Workplace platforms serving 25+ enterprise customers.

Product Scope: Onboarding journeys, automation modules, configuration UX

Owned KPIs: Time-to-Value, Weekly Active Usage, Product-Led Growth (PLG) Velocity, NPS / CSAT, A/B testing

- Reduced onboarding cycle time by 15% (20 → 17 days) by identifying inconsistencies in configuration across enterprise systems and working with engineering to streamline system workflows and integration touchpoints, improving data consistency during onboarding.
- Increased automation module engagement from 42% → 51% within 90 days by analyzing cohort-level activation drop-offs and prioritizing high-impact improvements in onboarding and configuration experience using RICE.
- Improved NPS/CSAT from 82% → 90% by addressing repeated workflow failures caused by misaligned configuration dependencies; partnered with engineering to map system behavior and introduced validation guardrails that reduced misconfiguration issues by 18%.
- Increased automation activation by 9% by identifying gaps in user understanding of system behavior and collaborating with engineering to simplify configuration flows, reducing early-stage drop-offs.
- Translated enterprise customer feedback into product improvements by deeply understanding system constraints, data flow, and configuration dependencies, leading to more intuitive onboarding and higher product adoption.
- Reduced rework and improved feature delivery efficiency by 20% by writing detailed PRDs covering problem statements, system workflows, edge cases, and success metrics, enabling clearer alignment between product and engineering.

Business Analyst – Product Operations ([Spoors Technology](#))

December 2020 – December 2021, (Hyderabad, India)

Contributed to CRM/CLM/HCM workflow product improvements across enterprise customer base.

Product Scope: Workflow modules, approval-routing systems

Owned Metrics: Feature Adoption, Churn Risk, Release Quality

- Increased workflow module adoption from 48% → 57% across two release cycles by analyzing subscription cohorts and refining approval-routing configuration logic.
- Accelerated Time-to-Value (TTV) by 20% across 15+ enterprise accounts by identifying configuration bottlenecks through customer feedback and shipping streamlined workflows, directly reducing early-stage churn risk.
- Introduced revenue-tier-based backlog prioritization framework aligning roadmap investments to high-value customer segments, reducing post-release defects by 15%.
- Translated customer insights into structured user stories and acceptance criteria in partnership with engineering, improving release clarity and reducing clarification cycles by 18%.

Project:

AI-Driven Activation & Retention Engine | Airtribe Capstone

Designed an activation and retention optimization framework across mobility, subscription, and edtech platforms using AARRR and JTBD methodologies.

- Identified key drop-offs in user engagement caused by fragmented decision signals and designed a recommendation system combining behavioral inputs and business rules, improving repeat usage and retention.
- Defined clear OKRs focused on Week 1–4 retention and repeat frequency, shifting product evaluation from vanity metrics to meaningful behavioral outcomes.
- Prioritized initiatives using RICE and mapped user experience improvements directly to measurable activation and completion metrics.

Certifications:

- AI- First Product Manager 2026: Airtribe
- PMI Agile Certified Practitioner (PMI-ACP) - Project Management Institute
- SAP Analytics Cloud - Certified Application Associate (Reporting & Planning)

Education:

- International Management Institute: MBA 2021
- Sam Higginbottom University of Agriculture, Technology & Sciences: BBA
